

Good Morning!

I hope you are well, thank you for the time you have taken to apply for our Software Engineer Industrial Placement.

*The next stage of the recruitment process is to complete a technical test. **The fixed deadline to complete this test is Monday 25th February. Therefore please make sure you give yourself plenty of time to do the test, so you don't have to rush it just before the deadline.***

We will start to review all applications after the 25th Feb once all the tests are in and this may take a few weeks due to the volume of applicants, therefore please don't worry if you don't hear from us for a little while. We will let you know either way whether you have been successful or not as soon as we can.

We are currently recruiting for the following trainees to work in BBC News (all based in London):

- *Native app trainees (iOS or Android)*
- *Web trainees (JS on AWS)*
- *Backend trainees (Java, Scala, Ruby, Python, AWS, Jenkins, etc)*

In order to understand more about where you'd prefer to be placed, we'd like to know which areas in the list above you'd like to be considered for (Apps, Web or Backend). If you'd like to be considered for all three that's absolutely fine, but equally if you'd only like to be considered for one area, this will not affect your application.

*The code test – if you've picked one area to be considered for, please complete the code test for that area. If you've picked more than one area to be considered for, we'd like you to complete a code test only for your **preferred option**. You'll still be considered for each of the areas you've expressed a preference for, but you only need to complete one code test.*

The code tests:

- *Apps (Attached)*
- *Web (Attached)*
- *Backend – for this you can complete either of the other code tests. We are not providing a backend specific code test because the skills we are looking for are unlikely to have come up in your degrees and the other code tests show coding skills that are transferrable.*

After completion and review of your code tests, those who are successful will be invited to an assessment day in London where we will interview you for all the areas you've chosen to be considered for.

GOOD LUCK!
